

# YURT FOUNDATION

Once you have placed your yurt order, the next thing to do is plan and build the foundation for the yurt.

The yurt floor will then be placed on top of this foundation. Types of foundations can vary, but the ones we recommend have been certified by a professional engineer and satisfy building codes.

Yurts 12ft. to 20ft. in diameter can be placed directly on cement blocks, as per the diagram provided. The foundation for yurts 24ft. and 28ft. in diameter should be made of cement pier blocks, supporting 4" x 4" timber and 2" x 10" stringers, as per the diagram provided.

A deck can be built off this foundation, or if you wish, the yurt can be placed on top of a deck, although this method is more expensive.

Yurtco's sectional, insulated yurt floor can be placed directly on top of the foundation, or you can build your own yurt floor.

# YURT FLOOR

**Y**urtco offers a superior quality, insulated, sectional yurt floor, custom designed for every size yurt.

Floor sections are locked together with splines for a perfect fit. This type of floor is custom designed and engineer approved, making your yurt truly portable.

The insulated floors are a sandwich construction using pressure treated joists and 4-1/2" thick styrofoam, laminated to exterior grade OSB 5/8" plywood decking. This provides an extremely warm, strong and durable floor. Yurtco will supply a construction diagram and material list to help you build the yurt platform.

A choice of three amazing finishes are available for our floors. These include:

- Roll-Dek, a lifetime coating, permanently flexible, unaffected by weather extremes and resistant or unaffected by ozone, sunlight, most acids, alkalis or solvents. This finish prevents any moisture from ever seeping into the floor, thus preventing degradation and rot.

- Dek-Master, a waterproof vinyl decking, waterproof, all-weather protection that provides years of enjoyment with minimum maintenance. PVC vinyl has properties that resist mildew and rot, mild acids and alkaline spills, and successfully repel most stain causing products.

- Quality painted finish; ideal for those who plan to install another floor covering over top, such as vinyl, parquet or carpet.

Laminate is a popular flooring which is economical, looks terrific and can be installed in one day. It is hard wearing and blends beautifully with the wood lattice work and rafters in the yurt.
